

Add Revision Index to Compilation

04/16/2025 2:46 pm MDT

It is often useful to identify which cards have changed when resubmitting a package or compilation to your customer. With a revision index page, DocBoss will check each card included in the package/compilation. If the card has changed (identified by a change to its revision number), DocBoss will mark it in a grid.

A Complex Project P.o. No.: 12345 Document Title: Drawing Package Document No.:
--

Revision INDEX					
	A	B	C	D	E
4554-E02-001	x				
4554-E02-002	x				x
4554-E02-003	x	x	x	x	
4554-E02-004	x				
4554-E02-005	x	x	x		
4554-E02-006	x				
4554-E02-007	x				
4554-E02-008	x				
4554-E02-009	x	x			
4554-E02-010	x				
4554-E02-011	x				

Package revision number (for each submittal)

x in cell if card has changed since last package issue

In this example, customer knows that **ONLY 4554-E02-002** was updated in the last package/compilation revision (rev E)

DocBoss will also track/identify of any cards which have been REMOVED from the package since the last issue (i.e. strike through any card which is no longer in the package). This table is generally added as a separate worksheet in your (Compilation) cover page or cover page template.
