

# Compilation Details and Structure Options

09/12/2024 12:59 pm MDT

## Compilation Info

The screenshot shows a 'Compilation Info' form with the following fields and options:

- 1** Name: MRB
- 2** Description: (empty text area)
- 3** File Type: PDF
- 4** Cover Pages: Ensure every doc has cover page
- 6**  Respect cover page suppression for each card
- 5**  Include Markups  Add Comments Page to Document(s)
- 7**  Regenerate ENTIRE Compilation during submittal process

- 1. Name:** The name of the compilation.
- 2. Description:** Additional information that has to be included about the compilation.
- 3. File Type:** Choose to produce compilation as a single pdf file or a zip with folders.
- 4. Cover Pages:** Available options for cover pages are "No Cover Pages", "Keep cover pages on returned docs only" and "Ensure every doc has cover page". Note: When "Respect cover page suppression for each card" is selected - whether you've selected to "Keep cover pages on returned docs only" or "Ensure every doc has cover page" - DocBoss will ensure that if you've chosen "No stamp and no cover page" on a particular card, no cover page will be added to that card in the compilation. If the compilation is zip file type, cover pages will be merged into PDFs and generated as a separate file alongside non-PDF files.
- 5. Include Markups:** Check option if markups shall be included in the documents
- 6. Add Comments Page to Document(s):** If documents must contain the Comments Pages when building the compilation the check box shall be marked.
- 7. Regenerate ENTIRE Compilation during submittal process:** If this option is selected the Compilation (and Index if also linked to the compilation) will be regenerated during each submittal. The Index and compilation will automatically update to reflect any card changes upon submittal. If this is not enabled, you will need to manually regenerate the Compilation/Index to ensure the latest version is submitted out of DocBoss. For large projects, this should be left unchecked as the transmittal process will slow down as a result.

Note: if you make any changes to the above selections, you will need to save the compilation prior to Generating, by pressing Save Compilation (local only)

**Save Compilation (local only)**

**Compilation Info**

Name: \*

Description:

File Type: PDF

Cover Pages: Ensure every doc has cover page

Include Markups  Add Comments Page to Document(s)

Regenerate ENTIRE Compilation during submittal process

Respect cover page suppression for each card

## Compilation Layout

**Compilation Layout**

Select Compilation Layout: - Select Compilation Layc

**+ Save As**

A predefined layout can be selected or specific layouts can be saved for future compilations.

Details are available [here](#).

## Compilation Sub-Packages

**Compilation Sub-Packages**

Create Sub-Packages by:  Enable All Fields  Do not create Sub-Package

Create separate sub-package

If a section does not contain

If doc code does not contain

Item/Model

Line No. (Acme)

Line No. (Wolfe)

PO No. (Acme)

PO Rev No. (Acme)

Sub-Supplier

Tag No.

Vessel

Sub-Packages can be created (based on your selection) within the compilation.

Once created, Sub-Package Sections can be ordered as desired.

## CD Copy

### CD Copy

---

CD Required:       CD Copies Number:

This information is used strictly in the pricing module. It help you charge customers for document services - including a fee for the number of CD's being created.

## Paging

### Pagination

---

Page Number Position:  ▼

Page Number Pattern:  

Page number position can be selected for header and footer, with various location options.

## Templates

### Templates

---

Compilation Cover Page:  ▼

Table of Contents:\*  ▼

Section Title Page:\*  ▼

Doc Code Title Page:\*  ▼

There are four different templates used in compilations. Select the applicable templates for the TOC and different cover pages.

Details about each template are available [here](#).

## Table of Contents and Bookmarks section options

Detailed information about Table of Contents and Bookmark section options is available [here](#).

## Compilation Structure Options

**Compilation Structure Options**

---

Sort documents inside section:  By pattern value  Choose fields for sorting

On generation, do not include document files. Create structure only

Show Not Applicable on Doc Code Title Page if no cards for a code

Disable title page for Doc Code

Hide Doc Code from TOC/Bookmarks List

Default to Allow Submittal Anytime [?](#)

**Sorting documents inside section:**

Sorting values can be selected by patterns selected under "Table of Contents and Bookmarks sections options" or choosing fields here.

**Compilation Structure Options**

---

Sort documents inside section:  By pattern value  Choose fields for sorting

On generation, do not include document files. Create structure only

Show Not Applicable on Doc Code Title Page if no cards for a code

Disable title page for Doc Code

Hide Doc Code from TOC/Bookmarks List

Default to Allow Submittal Anytime [?](#)

*\* available variables*

**On generation, do not include document file. Create structure only**

This gives you the option to check if the compilation structure is correct without including the files, which will save you time when generating the compilation.

**Show Not Applicable on Doc Code Title Page if no cards for a code**

This option can be used when cover pages shall be included in the compilation even if there are no files attached. An example of when this would apply is if you are creating compilations based on "Shipment" level. Shipment 1 does have D04 - Specialty Drawings, Shipment 2 does not. To keep the compilations consistent you still want to show the code but there are no actual cards for this code on Shipment 2. Therefore a cover page will still be added but will indicate Not Applicable on it.

Acme Chemical  
 Little Project - Acme  
 PO#: 5678  
 4528KR

**1.4 D04 - Specialty Drawings**  
 Not Applicable

When enabled - and new codes are added to the book, they will default to have the title pages disabled (saves having to click each icon for each code). Available on overall default settings for system.

Similar to above - a default value which appears only when the previous setting is enabled. Again - set the default value to hide doc codes from TOC/Bookmarks without having to click each code. Available on overall default settings for system.

This is generally controlled from the doc code - but can be set as default on compilations. Available on overall default settings for system.

## Generate Compilation / Download Compilation

**Note** - you must Generate Compilation before you can Download Compilation

 Download Compilation	 Generate Compilation
 Download Table of Contents	 Generate Table of Contents
 Download Compilation Cover Page	

## Regenerating Status

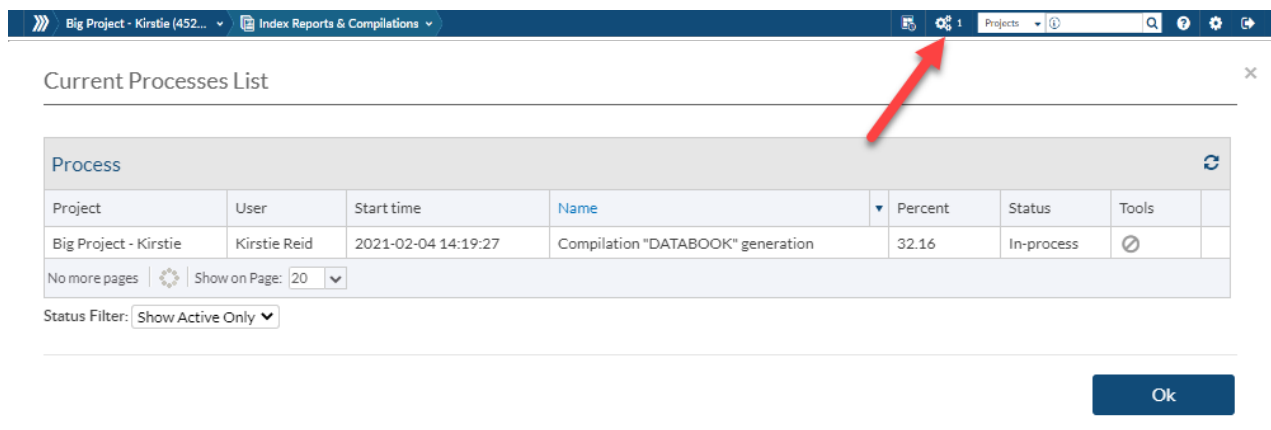

This area shows the status of your generated Compilation or Table of Contents

**Regenerating Status** 

---

Compilation regenerating process started at 2021-02-04 14:19:27. It is 71.00% complete  
Table of Contents was successfully regenerated at 2021-02-04 12:49:16.

The current generation status can also be seen by clicking on the "Active Processes" tool on the top bar of your screen

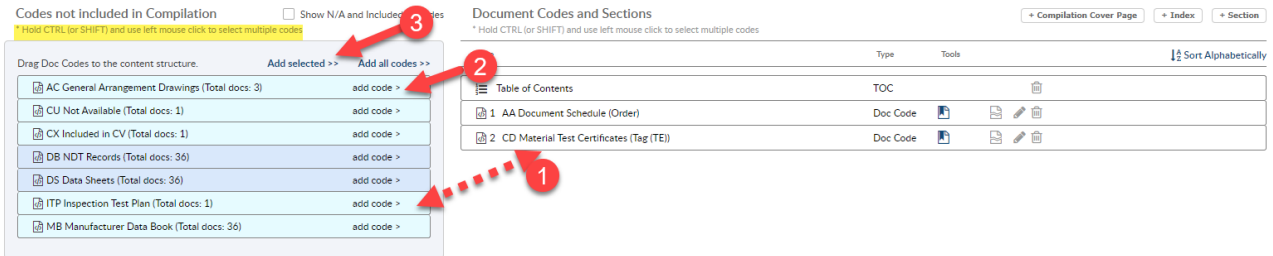

The screenshot shows the top navigation bar with the 'Active Processes' icon highlighted by a red arrow. Below it, the 'Current Processes List' window is open, displaying a table of active processes.

Project	User	Start time	Name	Percent	Status	Tools
Big Project - Kirstie	Kirstie Reid	2021-02-04 14:19:27	Compilation "DATABOOK" generation	32.16	In-process	

Below the table, there are controls for 'No more pages', 'Show on Page: 20', and a 'Status Filter: Show Active Only' dropdown. An 'Ok' button is located at the bottom right of the window.

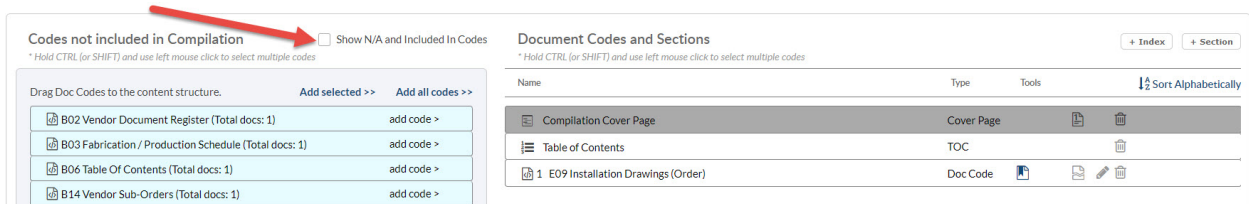

# Document Codes and Sections

To add the codes to the compilation there a couple of easy options. You can 1) simply drag and drop the code from the left grid into the right "Document Codes and Sections" grid, or 2) you can click "Add Code" and it will place the document into the grid or 3) you can highlight multiple codes and "Add Selected"

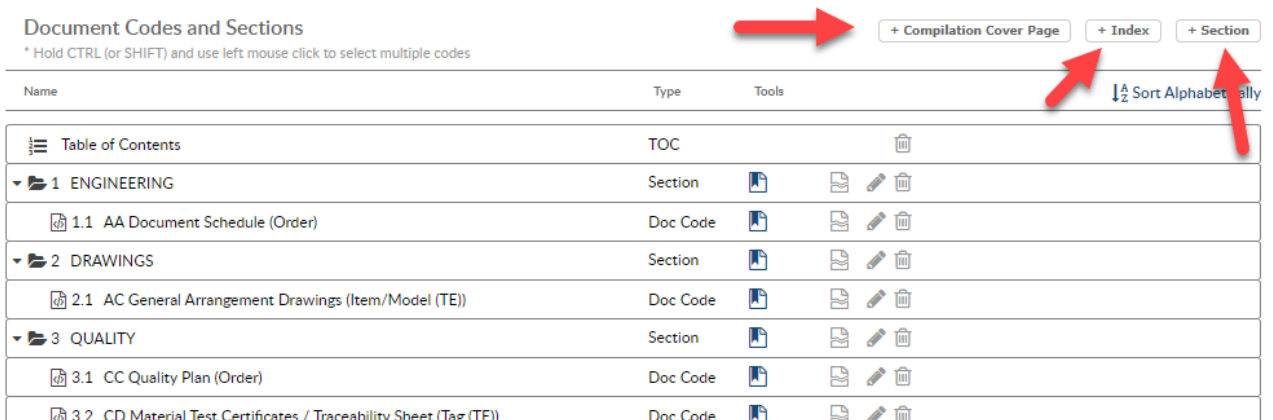

## Show N/A and Included In Codes

Mark the check box to include the Doc Codes that were marked as N/A or Included In in the Doc Requirements grid.

## Creating your Compilation layout

Here you can create and preview the general layout of your compilation. Once you have added your codes (as outlined above), you can now add your Compilation Cover Page, Index, and sections then rearrange them to your customers requirements.

Clicking on the Compilation Cover page will automatically place the cover page at the top (beginning of your book).

To add sections to your compilation, click on "Section". You will name your section. Once you have created your sections, you can drag and drop anywhere you'd like. To add documents to your sections, simply drag and drop them on top of the section.

## Add Section

Name\*

Included In\*

Cancel

Save

If you wish to add an Index you can do so here. Clicking on the Index button will bring up a new screen where you will name your Index, choose where you want to insert it (if left at default "\" it will be placed at the very end of the compilation), which template you'd like to use, and which codes sections/codes you wish to include.

## Add Index

Name\*
