

Process Card to Unit Changes

10/28/2024 1:09 pm MDT

Overview

Sometimes, users may need to make changes to the **Equipment List** after documents have been submitted. Some situations where this could happen are:

- A project change order has been received
- A new piece of equipment has been added
- A tag has been removed

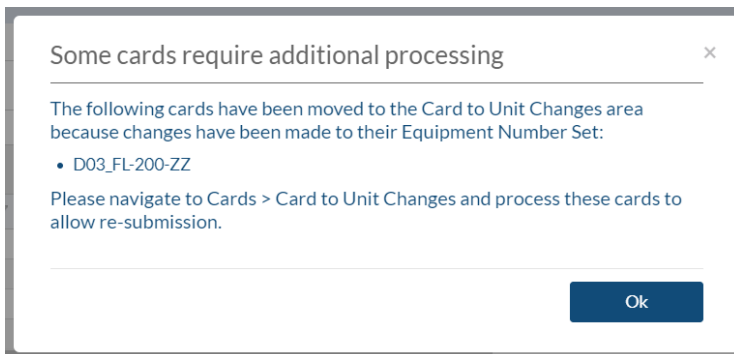

For a more detailed explanation, see [Card to Unit Changes Causes](#).

Important!

When a change is made to the **Equipment List**, DocBoss automatically updates the equipment linked to existing, autogenerated cards. If the card is in progress, DocBoss will ask how to proceed. This process is managed through the **Card to Unit Changes** screen.

Identification

Cards with pending card to unit changes are not able to be submitted until the changes are processed:

On the Card List, cards with pending card to unit changes display the unit changes in light gray font:

Card List

Standard Query

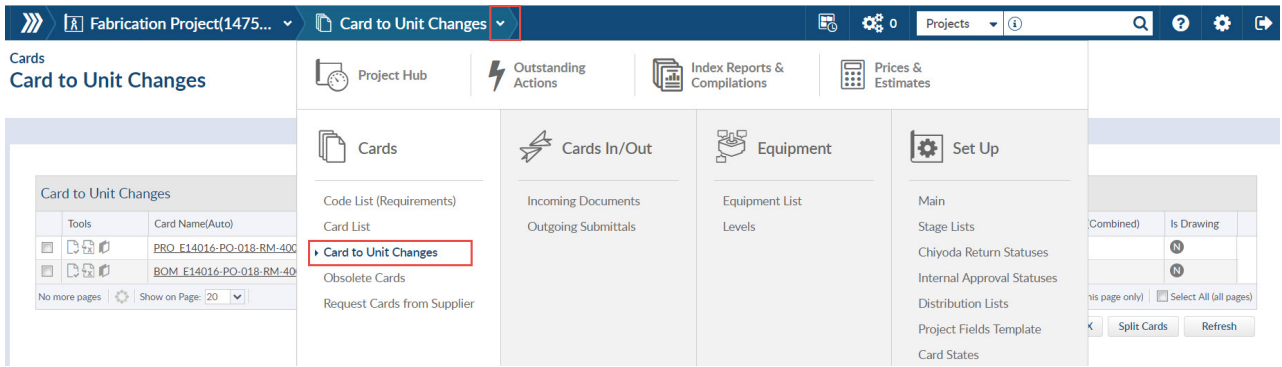

Keyword Quick Filters

Tools	Doc Code	Doc Code Name	Status (Combined) ↓	Item/Model List	Line No. List (Alpha)	Tag No. List	Document
<input type="checkbox"/>	D03	General Arrangement Drawings	X(+)	FL-200-ZZ	5, 8	FL-102, FL-103	
<input type="checkbox"/>	L14	Functional Test Reports	X(+)	FL-200-ZZ	5	FL-102	
<input type="checkbox"/>	O10	Technical Deviation Requests	X(+)	FL-200-YY	4	FL-101	

Navigation

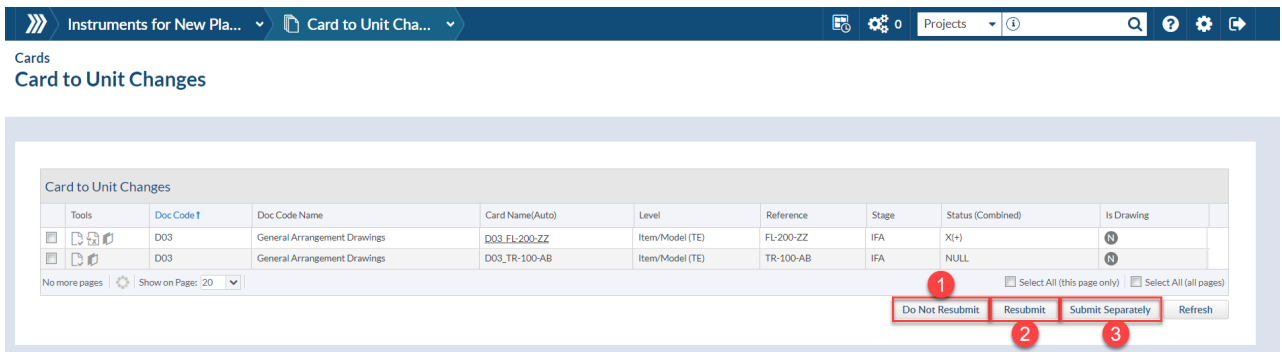

To find the **Card to Unit Changes** screen, navigate to the project and open the project menu from the dropdown as

shown in the image below. Under the **Cards** heading, select **Card to Unit Changes**.

Options for moving cards out of Card to Unit Changes

On the **Card to Unit Changes** screen, there are three options which users may select from to move cards out of this stage. These options are listed to the bottom right of the grid (for bulk processing) and are also available under the **Tools** column (for individual processing).

1. Update EqList; Keep Current Status – The system will simply replace the old TagSet with the new TagSet. No changes will be made to the status of the card, it will not be queued for resubmission, and the customer will not be notified of the change. Use this option to acknowledge the change in the **Equipment List** without taking any additional action regarding the change.

Please note: when generating compilations, DocBoss uses the most recent file on each card. If updates to equipment need to be reflected on a card's cover page, a new submittal must be made. (To update the cover page without resending the document to the customer, make a submittal and then **auto-reclaim** it.)

2. Update EqList; Set to X – This option resets the existing card to **X** status and queues the card for resubmission. Use this option if you want to re-issue the document with the current (new) TagSet.

3. Split Cards – This option leaves the original card as is and creates a duplicate card (sheet) with the new TagSet. The new card will include the document from the original card, but will have a new document number.

Please note: for **Order** level documents, changes to any tag will push documents into the revision area. Generally, it is best to use **Update EqList; Keep Current Status** in these cases.

To process cards in bulk, select the checkbox on the left side of the grid for each applicable card, then select one of the options below the grid to apply the action to the selected cards.

To process cards individually, select the appropriate icon under the **Tools** column in the row for that card. Hovering over an icon will display its name.

The screenshot shows a software interface with a dark blue header bar containing navigation and search icons. Below the header, the text 'Cards' and 'Card to Unit Changes' is displayed. The main content area features a table titled 'Card to Unit Changes'. The table has columns for 'Tools', 'Doc Code 1', 'Doc Code Name', 'Card Name(Auto)', 'Level', 'Reference', 'Stage', 'Status (Combined)', and 'Is Drawing'. Two rows of data are visible. The 'Tools' column for the first row contains three icons: a document with a checkmark, a document with a magnifying glass, and a document with a trash can. A red box highlights this 'Tools' column, and a red arrow points to it from the left. Below the table, there are pagination controls including 'No more pages', 'Show on Page: 20', and selection options. At the bottom right, there are buttons for 'Do Not Resubmit', 'Resubmit', 'Submit Separately', and 'Refresh'.

Tools	Doc Code 1	Doc Code Name	Card Name(Auto)	Level	Reference	Stage	Status (Combined)	Is Drawing
	D03	General Arrangement Drawings	D03_FL-200-ZZ	Item/Model (TE)	FL-200-ZZ	IFA	X(+)	N
	D03	General Arrangement Drawings	D03_TR-100-AB	Item/Model (TE)	TR-100-AB	IFA	NULL	N

Please note: not all actions are applicable to each card. Only the actions available for processing a given card will be shown in its **Tools** column.
