

Modify Default Equipment (EQ) Number

07/22/2025 3:42 pm MDT

The default equipment (EQ) number is the value that is set to display whenever equipment units are generated on a template (for example, on cover sheets using the <Units_EqNumbField_List> variable).

To change the default EQ number, navigate to the project template (**Project Menu > Set Up > Project Template**). Under the "Project Settings" tab, find the "Default EQ Number" setting and update the value to the desired output.

Tag

Manual Cards Module
Yes

Major Tags Module
No

Display Sheet Adder for Manual Cards
Yes

Display only when Multiple Sheets
No

Note: The value that it initially selected comes from the project template settings (see article: [Project Templates](#))

If a specific code requires a different EQ value to be generated, the value can be modified for the individual doc code. To make the adjustment, navigate to **Project Menu > Cards > Code List** and from the "Eq#" column, select a different value directly in the grid for the appropriate doc code.
