Card to Unit Changes Causes

DocBoss shows cards on the **Card to Unit Changes** screen when a user changes or adds a new equipment value for those cards, AND the cards:

- have a file (active, or in their history), and
- have a doc code with any doc code type except "SDI Report" or "Compilation"

For example:

If there is a doc code with EQ=Item/Model, Type = Generated (Sub-Supplier) and doc code's card has a file, when a user adds a new tagged unit with a new Item/Model value for this card, the card will be moved to the **Card to Unit Changes** screen.

To resolve card to unit changes, see Process Card to Unit Changes.
