

Create MTR Packages

04/20/2026 11:44 am MDT

Create packages of MTR's quickly and easily

Automatically generate MTR (Material Test Report) books or packages based on equipment-specific heat or lot data, pulling in the required library MTR files directly.

What is a package in DocBoss?

A **package** is a collection of related documents that are grouped and submitted together (when it's component cards are NOT to be submitted to the customer individually). Similar to a compilation, packaged documents can include bookmarks and a hyperlinked table of contents.

See it in action

This video walk through the process of uploading and packaging MTR's for submittal in DocBoss.

Build your reports in a few simple steps

DocBoss saves you time by auto-generating MTR packages from data stored in the system.

Enter raw data in bulk

Upload your MTR records into a central library and include them across multiple projects. No need for doc controllers to upload MTR's to individual projects - DocBoss will auto-assign them for you.

Auto-fill package data

Using your traceability data (heat numbers, certificate numbers, etc.), DocBoss will automatically pull the appropriate data into your MTR package, saving you an enormous amount of work.

Customize the structure

Should the MTR's be organized into specific sub-sections (e.g., by drawing, equipment section, etc.)? Should different sets of MTR's be included in separate packages? MTR's can be automatically grouped/separated into your customer's preferred format.
