

Release Notes - August 2025

02/09/2026 10:22 am MST

Here's a list of updates found in our short August 2025 release.

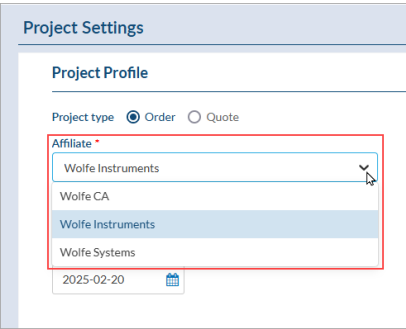

Projects (Individual)

Cover Page / Stamps Column in Card List Grid

The selected option for [cover pages and stamps \(per doc code\)](#) is now available to [add as a column](#) in the card list grid, making it easier to identify requirements. If modifications are required for individual cards, this can be done by [updating the setting in the card form](#).

Update Affiliate

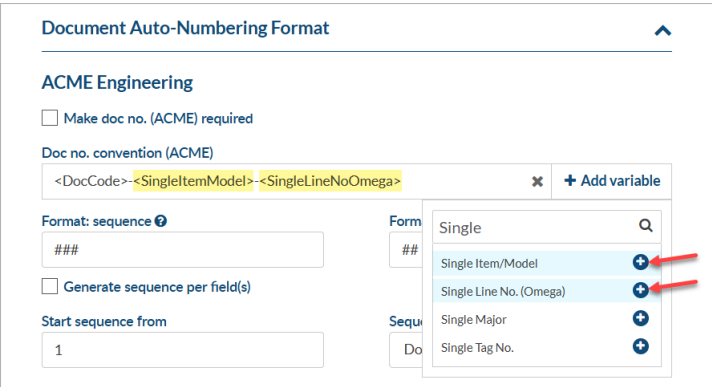

If required, the affiliate associated with a project (selected at [project creation](#)) can now be updated on [project main](#) and is no longer locked, increasing flexibility.

The screenshot shows the 'Project Settings' form, specifically the 'Project Profile' section. The 'Project type' is set to 'Order'. The 'Affiliate' dropdown menu is open, showing a list of options: 'Wolfe Instruments', 'Wolfe CA', 'Wolfe Instruments' (highlighted), and 'Wolfe Systems'. A red box highlights the dropdown menu, and a red arrow points to the 'Wolfe Instruments' option.

Document Auto-Numbering

There are two new [document auto-numbering](#) variables available. One generates the item/model value for tagged equipment, and the other the supplier line number value. These variables function similarly to other "single" variable options, where the value will be included in the document number if there is a single tag, and will not be included if more than one tag.

The screenshot shows the 'Document Auto-Numbering Format' form for 'ACME Engineering'. The 'Make doc no. (ACME) required' checkbox is unchecked. The 'Doc no. convention (ACME)' is set to '<DocCode>-<SingleItemModel>-<SingleLineNoOmega>'. The 'Format: sequence' is set to '###'. The 'Generate sequence per field(s)' checkbox is unchecked. The 'Start sequence from' is set to '1'. A dropdown menu is open, showing a list of variables: 'Single', 'Single Item/Model', 'Single Line No. (Omega)', 'Single Major', and 'Single Tag No.'. Red arrows point to the 'Single Item/Model' and 'Single Line No. (Omega)' options.

Workflow - Start New Stage List

To increase flexibility with stage lists, it is now possible to start a new stage list upon assigning a [complete status](#) to a card (thus continuing further workflow after stage completion). This option is available when processing cards both [individually](#) and [in bulk](#).

To start a new stage list, check the "Start a different stage list (on save)" box and select the new stage list from the drop-down. If there are many stage lists available, begin typing the name to filter the list. Once selected, click save and the card will move into the first stage of the selected stage list.

When is this useful?

Sometimes, it can be difficult to pre-establish the workflow required for a document, or the workflow takes a different path than what was set up initially. In cases like this, a new stage list can be selected after completing a stage, giving you the flexibility you need.

For example, if you have multiple single-stage stage lists created, you can choose the next stage for a document following the completion of the current stage. While this requires manual input, it can be desirable in non-prescriptive situations.

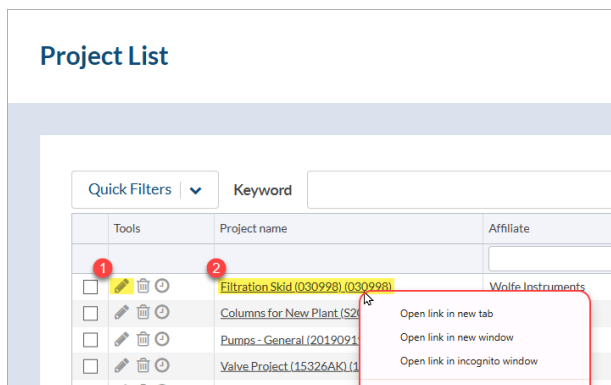

The screenshot shows the 'Status & Routing' section of a form. It includes a 'Stage List' dropdown menu with 'IFR' selected, a 'Select different stage list' link, a 'Stage List Workflow' section with 'Current Stage' and 'IFR' details, and a 'Doc Status' dropdown menu with '1 - Approved' selected. A red circle with the number '1' points to the 'Start a different stage list (on save)' checkbox, which is checked. A red circle with the number '2' points to the dropdown menu below the checkbox, which contains the text 'Select or type ahead...'.

Projects (All)

Project List - Open in New Tab/Window

There are now two ways to opened in a [new tab or window](#) from the Project List grid, making it easier to open multiple projects quickly:

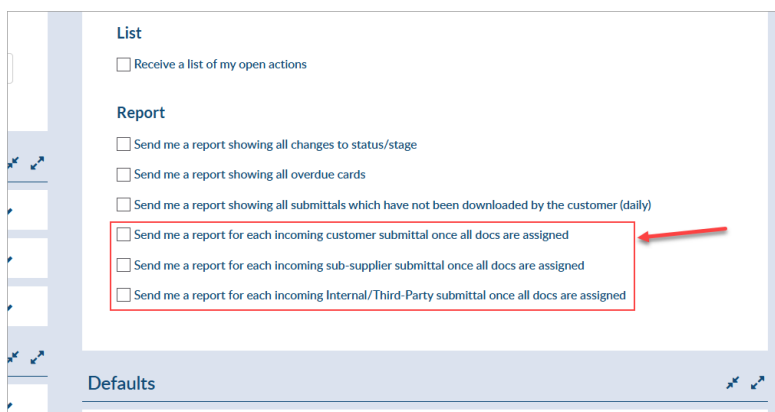

1. By right-clicking on the pencil icon under the "Tools" column
2. By right-clicking on the project name

Report for Incoming Submittals

When a submittal has been received into DocBoss and the files have been assigned to their corresponding cards (via [individual](#) or [bulk match](#)), a report can be emailed outlining the details of the completed submittal. This option (available in the "Email Notifications" section of the user profile) can be enabled for individual users (**System Menu** > **Users** > **Manage Users**).

The reports are source specific. If a user would only like to receive reports about submittals from a specific source (e.g., customer), simply enable the appropriate report and leave the others disabled.

If you have any questions or feedback regarding our latest release, please reach out to our Support team and we'll be happy to assist.
